Facing a difficult software challenge?

[Subhead:]

Organizations turn to us with their toughest performance tuning, diagnosis, and custom software development issues.

When the experts haven't been able to provide a solution, Elres steps in.

- **After one Fortune 500 company had spent two and a half years trying to resolve performance issues with a 40 million dollar application – and was ready to put more money into new hardware – they called us. We did a thorough analysis and quickly got to the root issue. After we refined some of the software, the application tripled in performance.**
- **For an energy company, we developed a custom application that would detect massive engine failures twenty minutes before they occurred, saving the company four million dollars on each failure instance.**
- **A major technology company was ready to launch a 35 million dollar internal application that its outside vendor claimed would support 3500 users. We load tested it at 25 users, and it crashed. They sent it back to the vendor to be fixed before the launch, saving themselves untold headaches and unnecessary costs.**

We've resolved software problems for Intel, Verizon, H&R Block, Nike, Fedex, HP, Johnson & Johnson, and the Mayo Clinic as well as for smaller businesses and public agencies such as The U.S. Department of Agriculture.

Why do we do so well with tough assignments?

As you might expect, the primary reason is that we have an exceptionally high level and broad range of expertise. This allows us to examine your software problems in depth and get to the root issues, instead of trying to troubleshoot one area at a time.

It also helps us develop custom software that directly, entirely, and efficiently addresses everything you need done.

But we think our success results also from our values as a company, including a relentless commitment to our customers and to seeing every job through to a successful conclusion. More on that [here](#). *[Link to About Us page.]*

[For box on upper right hand side of page:]

A genuine breakthrough in quality testing automation

Find out about our revolutionary automated record and playback solution that does not require testers to be certified. This entirely new concept:

- Greatly reduces testing costs
- Dramatically increases the number of tests you can do
- Enables affordable testing early in the development process to reduce rework costs and significantly shorten development cycles.
